Introduction

The Bundaberg consultations were undertaken on 28 April 2021 at the Generator in Bundaberg. The consultation had 23 participants and was conducted over a five-hour period.

Workshop purpose

The regional workshops were held statewide to:

- increase the understanding of the Health Equity agenda
- explore how the Health Equity Regulation will change the health landscape in Queensland
- discuss what this means for Hospital and Health Services (HHSs) and Aboriginal and Torres Strait Islander Community Controlled Health Organisations (ATSICCHOs) in delivering health services
- explore the implications and associated challenges for HHSs in meeting their requirement to prepare their Health Equity Strategy (HES) within 12 months of the regulation being passed
- identify any tools that would assist HHSs to develop their HES
- socialise other potential health reforms (outlined in section 3 of the Discussion Paper) to identify the ones that have the greatest support and to identify any other important reform items.

Workshop structure

The workshop was broken into three parts to correspond to the three sections of the Discussion Paper. Each section was discussed and explored through key questions and subsequent discussion with the groups. Scribes from Queensland Aboriginal and Islander Health Council (QAIHC) and the Department of Health took notes to capture the essence of the discussions and the thoughts and opinions of the participants.

Section 1

Discussed the journey that Aboriginal and Torres Strait Islander peoples have taken to improve health outcomes in Australia and Queensland since 1971. This included the services undertaken by the Aboriginal and Torres Strait Islander community-controlled sector and Queensland Health. While there have been some health gains, the current pace of reform and activities is not enough to meet the Close the Gap (CTG) targets by 2031.

Section 2

Discussed the health equity journey since 2017, including the current tranche of reforms being introduced in Queensland through the new Health Equity Strategy Regulation. There are going to be additional accountability requirements on HHSs to demonstrate co-design and working in partnership with ATSICCHOs. Explored the current issues with the local health system and what will need to be done to build a health system that better meets the needs of community and where all providers are working collaboratively towards improved health outcomes.

Section 3

Discussed the 20 proposed ideas to drive further system reforms to supplement the new HESs. These `ideas` are not limited to 20 as others could be identified, but it is important to have an idea of what could be relevant to this region and its priority. Details of the ideas are provided in Appendix 3.
**Report structure**

During the consultative process across the state, there was overall agreement that the health equity design principles (page 23 of the Discussion Paper) should include cultural capability and social determinants of health. Accordingly, the health equity design principles used for this report are:

- First Nations leadership
- Local and regional decision making
- Reorienting local health systems
- Cultural capability (this could be changed to cultural safety)
- Social determinants of health.

Further, five key themes have emerged from the workshops. These are:

- Systems
- Care
- Funding
- Workforce
- Culture.

This report drills down further to map the principles to the key themes. There is often overlap in the learnings and how they have been attributed to the principles, so you may see some comments in multiple places as they are applicable to a variety of areas.

**Executive summary**

*The Bundaberg region does not have a good history of a health system working collaboratively. It is evident that there has been a breakdown in working relationships between parties in this region and that attaining the outcomes of health equity will be challenging if this is not resolved. There has been a change in personnel in the recent past, and it is hoped that along with the health equity reforms, this will add impetus to achieving a more integrated way of moving forward.*

Major issues of racism, disadvantage brought about from the Social Determinants of Health (SDoH), and distrust of the system impact strongly on the health outcomes for First Nations peoples in this area. Workforce issues, as with many other areas, cause major constraints on the system to provide culturally appropriate care. In turn, the lack of a cohesive working relationship between First Nations providers and the HHS means many First Nations peoples avoid any interaction with the health system until they have a serious health issue.

Models of care appropriate to the local community must be considered along with funding reform. There needs to be a more streamlined service for patients with wrap-around care from the patient leaving home to returning. This will require genuine partnership and trust between providers. Outside-hours care is an area of great concern, with many First Nations peoples not accessing the system because there is no one culturally appropriate available or self-discharging because, again, there is no one culturally appropriate to explain why they should remain.

A baseline audit needs to be undertaken of institutional racism, and ongoing training and support must be provided to staff to ensure their cultural competence. Consideration could be given to a program such as Courageous Conversations currently in use on the Gold Coast.

**Top five health reforms considered a priority for this region by the participants.**

1. Implement funding incentives to address specific First Nations equity issues
2. Increase Queensland Health’s First Nations employment targets commensurate to local population or hospital presentation and user rates (whichever is greater)
3. Undertake annual independent institutional racism assessments across Queensland Health
4. Release a biennial First Nations health equity report tabled at Parliament by Chief Aboriginal and Torres Strait Islander Health Officer
5. Legislate the responsibilities of the Chief Aboriginal and Torres Strait Islander Officer in the Hospital and Health Boards Act 2011
Key discussion points

The discussion points from the Bundaberg consultation will be incorporated into the overall state consultation report, which will be used to develop the guide and toolkit that HHS will use to develop their health equity strategies over the next 11 months.

Principle 1: First Nations leadership

Care
- Need to work together.
- Need to start from a positive perspective and NOT a negative one.
- Explore the causal factors of poor health—social determinants.
- Need leadership of key positions in the health system and pathways to build the next generation of leaders.
- Need our children to have education to move into leadership positions within health.

Principle 2: Local and regional decision making

Systems
- Need leadership of key positions in the health system and pathways to build the next generation of leaders.
- Need a flexible approach and to evaluate and change as needed.
- Understand the needs and gaps.
- Learnings from areas where success has been achieved.
- There are issues between health providers which need to be addressed and effective partnerships need to be forged moving forward.
- Community asking key providers to work together.
- Basis of health equity is co-design and HHS and community control working together.

Care
- Need models that meet the local need for our region.
- Need to focus on what is needed within the region.
- Lived experience relates to what the model of care should look like and how it’s delivered.
- Collective leadership and common understanding of each other’s role in model of care.
- The model of care should be needs based, identify workforce and other support structures, and be fully costed against current health investment into the region.
- Need to have the right infrastructure to service the model of care.

Principle 2: Local and regional decision making

Funding
- Need to understand what investment is needed to implement the model of care that will bring health gains.
- Need to identify and agree where funding will go.
- Refer to above comments.
- Need to include the PHN to ensure that Commonwealth funding is included.
- Equity of funding for regional areas should be based on need.

Workforce
- Need our children to have education to move into leadership positions within health.
- Need to develop the workforce needed for all parts of the health system.
- Benefits of using a health worker vs nurse for navigator positions.
- Question whether this was best use of a nurse’s position, doing something that a health worker would be better placed to do.
- Need to analyse what is needed and what position is best used to achieve that outcome.
- This should be addressed as part of the model of care and the supporting workforce needed to deliver.

Culture
- Greater First Nations voice within the HHS.
- Aspects of cultural capability.
- Need to have the right regional governance, with the right organisations/members making informed decisions.
- Not having this brings confidentiality and ‘shame’ issues which results in non-attendance.

Principle 3: Reorienting local health systems

Care
- Need models that meet the local need for our region.
- Need to review and reflect on what has worked, what has not worked and why to be able to map forward journey.
- Better access to services.
- Need to consider alternative models of care—like outreach.

Workforce
- Need to develop the workforce needed for all parts of the health sector.
- Benefits of using a health worker vs nurse for navigator positions.
- Question whether this was best use of a nurse’s position, doing something that a health worker would be better placed to do.
- Need to analyse what is needed and what position is best used to achieve that outcome.
- This should be addressed as part of the model of care and the supporting workforce which is needed to support that model.
- Identify partners who can work with the health providers.
- Greater First Nations’ voice within the HHS.
- Aspects of cultural capability.
### Principle 4: Cultural capability

**Care**
- Examples of culturally appropriate services.
- Need community to understand the health system regardless of education or understanding level and to feel comfortable and confident to engage.
- Need to make after-hours and weekend care in HHS facilities culturally safe.

**Principle 5: Social determinants**

**Systems**
- Need to include social determinants in how to improve health care.
- Need models that meet the local need for our region.
- Identify the risks of not impacting the health issues.

---

#### Appendix 1—Section 1: The journey so far...

*Have aligned comments to the health equity principles as a guide to move from concept/ideas/comments to action.

<td>If everyone is moving forward together, then success will take care of itself. We don’t need to do more matrices, data or frameworks. Let’s not do a measure of where we are at, we know where we are at.</td>
<td>Need to work together.</td>
<td>P1: First Nations leadership</td>
<td></td>
</tr>
<tr>
<td>Let’s understand the grey areas and the gaps. Coming together is the beginning, staying together and working together is the success. No more matrices, as we have sufficient data.</td>
<td>Understand the need and gaps.</td>
<td>P2: Local and regional decision making</td>
<td></td>
</tr>
<tr>
<td>Agree it needs to be flexible and a different approach—listen more and modify things that don’t go well. Collaboration is missing.</td>
<td>Need a flexible approach and to evaluate and change as needed.</td>
<td>P2: Local and regional decision making</td>
<td></td>
</tr>
<tr>
<td>Current models are mainstream and designed to tick boxes. We need to be able to re-educate staff.</td>
<td>Need models that meet the local need for our region.</td>
<td>P2: Local and regional decision making</td>
<td></td>
</tr>
<tr>
<td>The current definition of health equity has negative focus—the positive frame and lenses that are required will see balanced outcomes. A story is shared of the Maori people in New Zealand and the inequalities experienced by Maori people.</td>
<td>Need to start from a positive perspective and NOT a negative one</td>
<td>P1: First Nations leadership</td>
<td></td>
</tr>
<tr>
<td>We need to understand, and have a commitment to change, a western system does not work for Aboriginal and Torres Strait Islander peoples.</td>
<td>Need models that meet the local need for our region.</td>
<td>P3: Reorienting local health systems</td>
<td></td>
</tr>
<tr>
<td>We need flexibility in the system, it has to be fluid to respond to the change, some models are not responsive enough to meet the needs or the social determinants of health. It is not a one size fits all model.</td>
<td>Need models that meet the local need for our region.</td>
<td>P2: Local and regional decision making</td>
<td></td>
</tr>
<tr>
<td>We need to go back to bare bones. For me in healthcare typically, people think they do one thing for Aboriginal and Torres Strait Islander people and that will resolve the issue. Mainstream have their own views, most times they don’t consider the community in need. It is a western/mainstream model not taking into account the needs of community. Go back to the start to find where the issue is and educate. Putting the blame on Aboriginal and Torres Strait Islander peoples needs to stop.</td>
<td>Need models that meet the local need for our region.</td>
<td>P2: Local and regional decision making</td>
<td></td>

</tbody>
</table>
Learnings

- Need to review and reflect on what has worked, what hasn’t worked, and why to be able to map forward journey.
- Need to focus on what is needed within the region.
- Examples of cultural appropriate services.
- Need to develop the workforce needed for all parts of the health system.
- Need leadership of key positions in the health system and pathways to build the next generation of leaders.
- Need to develop the workforce needed for all parts of the health system.
- Need to develop the appropriate services.
- Lived experience relates to what the model of care should look like and how it’s delivered.
- Lived experience relates to what the model of care should look like and how it’s delivered.
- Need our children to have education to move into leadership positions within health.
- Need leadership of key positions in the health system and pathways to build the next generation of leaders.
- Need our children to have education to move into leadership positions within health.
- Need our children to have education to move into leadership positions within health.
- Need our children to have education to move into leadership positions within health.
- Need leadership of key positions in the health system and pathways to build the next generation of leaders.

Design Principles*

- P1: First Nations leadership
- P2: Local and regional decision making
- P3: Reorientating local health systems
- P4: Cultural Capability
- P3: Reorienting local health systems
- NEW: Social determinants
- P1: First Nations leadership
- P2: Local and regional decision making
- P3: Reorienting local health systems
- P4: Cultural Capability

Principles

- Look at downstream also and whole value chain.
- Vertical integration—train people already in the system e.g. mentoring.
- Role of lived experience and gap in Aboriginal and Torres Strait Islander peoples represented in this.
- Education and traineeships are vital to introduce and support opportunity—need to be pathways that are supported.
- Equity means we can look and see people who look like us. Young people need to see black doctors and CEOs.

Regional focus, not state-wide, include examples of excellence and what equity looks like.

Indigenous Wellbeing Centre (IWC) – Discussed what is happening at IWC and how they educate Aboriginal and Torres Strait Islander patients in a culturally appropriate way that meets their patients’ needs.

Examples of cultural appropriate services.

*Equity picture needs a 4th picture that shows a member of the family playing in the ring—an image of success.

Attendee’s comments/views/input

We need to have the connectedness with each other, being agile, being flexible. We need to listen and learn. We need to do things differently to have a responsive system. For the definition we need to understand what excellence looks like and that everyone has different views. We can’t do what we have always done, or we will end up in the same position.

We can strive for all these wonderful things and tell our kids to go to school to conform to all these systems, but we need health. If we don’t have health, we don’t have nothing. We need to look at upskilling Aboriginal and Torres Strait Islander peoples. If we see people like us, that is equitable change. True equity is having family play in the baseball field.

We have to have opportunities for our kids to work for the systems. We need to introduce these opportunities and we know other regions have trainees, e.g. FNQ, but be careful using the examples. It’s different for each region. We had ten trainees. The criteria excluded people from participating.

<tr>
<td><strong>Challenges</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Community perspective needs to demystify the health system—some people bury their heads in sand as they don’t know what to expect. Encourage people to participate and put information at a community level and in language. For people not educated in that space, it is too heavy going and people need to know how they can be involved and what that will look like and mean.</td>
<td>Need community to understand the health system, regardless of education or understanding level, and to feel comfortable and confident to engage.</td>
<td>P4: Cultural capability</td>
</tr>
<tr>
<td>‘Intuitional compliance is committing to something but knowing how they will’ Saying it to get people off their back.</td>
<td>There are issues between health providers which need to be addressed and effective partnerships going forward.</td>
<td>P2: Local and regional decision making</td>
</tr>
<tr>
<td>IWC – We are the ATSICCHO in the region. Wouldn’t call HHS meeting the needs (challenged the HHS comment that nurse navigators being a positive experience).</td>
<td>Benefits of using a health worker vs nurse for navigator positions.</td>
<td>P2: Local and regional decision making</td>
</tr>
<tr>
<td>Nurse navigator position—thought it would have been Aboriginal and Torres Strait Islander HW—having an RN which wipes out a lot of the potential Aboriginal and Torres Strait Islanders to employ in the rest of the system. ‘What a waste of a RN driving someone around and not doing clinical work.’ Why aren’t local people being trained up and used as health workers and they don’t want to be RNs. ‘Change Nurse Navigators to Health Navigators.’ It’s not just us, other people are saying that.” Nurse navigators are a good concept but there are flaws. You do not need a RN to be in this role. Aboriginal health workers should be employed. It is a waste of a resource if you have nurses in these positions. Workforce issues and education issues that impact on bread-winner’s issues with self-funding—other AMS are saying the same thing.</td>
<td>Question whether this was best use of a nurse’s position, doing something that a health worker would be better placed to do.</td>
<td>P3: Reorientating local health systems</td>

| The HES need targeted funding. Funding needs to be flexible to respond. We need to ensure what we develop we need to match with funding. Resources are scarce, staff at capacity. Have a trust relationship with Galangoor and other services took time to establish. We need decentralised policies and procedures—we still die earlier. The change in the last 20 years has not been mammoth. We need to be funded; other regions such as Mackay have more funding/resources but we have a similar population. If we are going to revisit the change needed, we need flexible and responsive funding. We can do all these things but if you don’t have the funding then nothing can be done. | • Need to understand what investment is needed to implement the model of care that will bring health gains.  
• The model of care should be needs based, identify workforce and other support structures, and fully costed against current health investment into the region.  
• Need to identify and agree where funding to go. | P2: Local and regional decision making |
| IWC – we are sick of money going to management, were PHNs invited? We are not impressed by PHNs. The PHNs have nothing to do with the community. We get about 1% of the Aboriginal and Torres Strait Islander funding available—while the population is small, Aboriginal and Torres Strait Islander people have the highest need in the system. | • Refer to above comments.  
• Need to include the PHN to ensure that Commonwealth funding is included.  
• Equity of funding for regional areas should be based on need. | P2: Local and regional decision making |
| WBHHS – acknowledges the challenges with funding—local, needs, population, local needs assessment needs to be done. We are working with PHN. A commitment is required. | • Refer to above comments. | P2: Local and regional decision making |
| IWC – never had an AMS; our closest is Galangoor. Other ATSICHOs have been running for years and have had the chance to establish workforce. | • Need to include social determinants in how to improve health. | NEW: Social determinants |
| Discussion with Dr Mark Wenitong SDoH recognised 40% in the nation. We need to revisit our needs. | • Need to have the right infrastructure to service the model of care.  
• Not having this brings confidentiality and ‘shame’ issues which results in non-attendance. | P2: Local and regional decision making |
| Trust for the system does not exist. The system needs different ways of working e.g. different rooms people are ashamed. WBHHS—we may need to outsource to safe spaces. | • Previous discussions on health navigator vs nurse navigator and dependent on what the outcome is and what technical skills needed. | P2: Local and regional decision making |

**Enablers**

Nurse Navigators – 2 positions have received good feedback. Need to help people navigate the system and avoid people getting ‘lost’ and feel safe in the ED and in the system e.g. making sure people don’t leave the ED, but get the help required. Note: IWC did not agree.

Pathways need to be appropriate to support the holistic needs of Aboriginal and Torres Strait Islander peoples. We need culturally safe pathway that addresses needs of mob.

Lived experience is a model is needed around that can walk along—workforce development and pathways are key to this.

It is about demystifying the system to encourage people to be engaged in the system, ensuring health literacy access for community based, accessible, ensuring people understand what happens rather than just agreeing.

It’s about listening and understanding to the needs and understand SDoH e.g. nutrition.

<tr>
<td>Workforce, issues with attendance to ER on weekends, no Aboriginal and Torres Strait Islander staff available. Mental health changes are required for Aboriginal and Torres Strait Islander peoples—shares grandsons’ story, medical jargon issues not accessible to community to understand. It’s about educating families in a culturally appropriate manner.</td>
<td>• Need to make after hours and weekend care in HHS facilities culturally safe.</td>
<td>P4: Cultural capability</td>
</tr>
</tbody>
</table>

**Enablers**

Previous discussions on health navigator vs nurse navigator and dependent on what the outcome is and what technical skills needed.

Referral pathways between primary and secondary/tertiary needs to be culturally safe for community.

Lived experience relates to what the model of care should look like and how it’s delivered.

Making sure that people understand the health system and their journey to address their health issues and where this doesn’t happen, then the providers are able to explain for understanding.

Need to include social determinants in how to improve health.

Need to understand the causal factors of health.

NEW: Social determinants

P3: Reorientating local health systems

P2: Local and regional decision making

P2: Local and regional decision making
### Attendee’s comments/views/input

#### HHS – we are at saturation point for what we can offer. Our health workers are working at capacity. The historical funding models of QH limits what we can do. We need to revisit our funding and it is on a needs basis and not just the loudest voice. We are working and challenging our own systems internally and our biggest challenge is getting in broached on a needs base not an historical base.

- Need to review the model of care and the workforce and funding needed to deliver to achieve outcomes.
- The funding should then be aligned to the model of care costings.

#### Hub works well and taken years to build the trust e.g. great nurse navigator relationship with Galangoor.

- Good example of HHS and community control working together.

#### Want to see decentralised policies and procedures so we can have the ability to do it locally. State Health needs to consider that funding needs to be on a needs basis to meet the differential.

- Need to review the model of care and the workforce and funding needed to deliver to achieve outcomes.
- The funding should then be aligned to the model of care costings.
- This should also include having the right state legislative framework to support the region.

#### Wide Bay never had an AMS—for the last 12 years and we can’t be compared with other regions that have had well-established ATSICCHOs (and the implications of this for historical funding).

#### Mob always had to go to Rockhampton my whole life (IWC have no black faces there).

Very upsetting to hear these funding issues re historical footprint. Institutionalised racism comes in many shapes and forms, and this sounds like that to me re funding.

#### IWC—poor relationship with PHN. There is too much money going to keep people in jobs that have nothing to do with Indigenous health.

- Need to have a process for distribution of funding to where it’s needed.

#### Local representation is 3 per cent but need up to 10 per cent.

### Learnings

#### Need to review the model of care and the workforce and funding needed to deliver to achieve outcomes.

#### Need to be able to discuss and agree on collaboration amongst the health providers.

#### Need to have the health system be safe for community and continuity of care across each section of the health system.

#### Refer above.

#### P1: First Nations leadership

#### P2: Local and regional decision making

#### P3: Reorientating the local health system

#### P4: Cultural capability

#### P5: Cultural capability

#### Refer above.

#### Need to have a process for distribution of funding to where it’s needed.

#### Need to deal with institutional racism.

#### Get rid of DATSIP.

#### P2: Local and regional decision making

#### P3: Reorientating local health systems

#### P2: Local and regional decision making

#### P2: Local and regional decision making
Appendix 3—Section 3: Driving health equity across the health system and addressing the social and cultural determinants of health...

Future ideas for discussion

1. First Nations Health Board
   - Governance increases the Aboriginal and Torres Strait Islander local HHS board. Create sub-committees.
   - Council CEO sits on that board. The chair also comes along and one Aboriginal and Torres Strait Islander representative—do feed into the board, reports are made.
   - Ensuring a voice straight up because there have been points that it hasn’t.
   - Indigenous Health network, it has a process it going through execs, CEO and it can be tracked.
   - Increase current representative for Aboriginal and Torres Strait Islander (e.g. male/female).
   - Local representative from across the region e.g. Bundaberg, Hervey Bay.
   - A concept that can be taken back to the board.
   - Concerns that money not going to grassroots activities. Money not sitting at frontline.
   - Need to sort out regional mandate and representation—issue about how to get everyone to agree.

2. Increase Queensland Health’s First Nations employment target—state and regional
   - The 2% target should be increased.
   - Sit beside funding.
   - Other mechanisms e.g. scholarships.
   - Active marketing exists in other HHS regions not this region.
   - We need Indigenous employment HR; some exist in other regions.
   - There is a draft for the HR strategy HHS.
   - Increase the employment.
   - Pathways to get people there.

3. Legislate the responsibilities of CATSIHO state
   - YES—confusion as people thought it already was.

4. Release of biennial FN health equity report state/regional
   - Making tracks reports done 6 months by HHS.
   - This is a state level so yes it needs to be done.

5. Appoint a deputy CATSIHO State
   - Yes, ambivalent.

6. Introduce First Nations employment measure
   - Yes—local responsibility.
   - Ensuring Indigenous people are on interviewing panels.
   - Role descriptions—previously Indigenous people had to be on the interview panel but has changed.
   - Identification of identity on resumes—our mob can fear identifying themselves.
   - Included in job advertisements should be ‘we encourage Indigenous’.
   - Indigenous person/s should have final say in who is employed.
   - Consideration how the Indigenous representatives on panels are given true respect.
   - Consider how this looks to non-indigenous staff.
   - Would it be a percentage or a rate?

7. Create capability pipeline for HHS Board members
   - Some HHS have employed Indigenous executives which creates a pipeline higher up.
   - A board pipeline needs to occur.
   - A workforce pipeline needs to occur.
   - Train people up to be HHS Board Members.
   - Aboriginal unit is under an Allied health; it used to sit under CEO. Looking at where units sit with the HHS.
   - Important to establish the HHS.
   - Currently inequity exists.
   - Agreed that the HHS needs an Indigenous HHS executive position.

8. Establish regional coordinator care hubs
   - Already talked about. Not everyone uses ATSICHO’s so regional hubs could work.

9. Establish regional ATSICHO backbone organisations
   - This was proposed to QAHC, federally Medicare local wanted to make an Indigenous regional body, so Institute for Urban Indigenous Health (IUH) who IUH represents has just been lost.

10. Implement Queensland Health funding incentives to drive equity
    - QUIPP funding for Indigenous units to meet criteria to improve low birth weights—it needs to be tiered funding—being able to locate funding rather than be lost. It needs to be tiered.
    - Recognition and understanding of regional need.
    - Remove relevance of funding source and focus on patient and community outcomes. Make conversation.

11. Embed cultural capability into Clinical Services Capability Framework
    - Yes, it is happening but needs to continue to happen, need to specialised programs.

12. Refresh Queensland Health Aboriginal and Torres Strait Islander Cultural Capability Framework 2010–2033
    - YES, badly! Driven by state and HHS should conform.

13. Undertake annual independent institutional racism audits
    - YES! Needs to happen and the Henrietta matrix is great. Can’t be done by HHS needs to be independent.

14. Amend birth notifications to acknowledge birth parent’s cultural connection to country
    - Yes, change needs to occur, especially for parents giving birth in other HHS regions (National—BDM), looking at the time of birth registration should occur at birth to ensure Indigenous babies are registered.
    - Could be project on its own.
    - IWC suggested that it sits outside health equity.
    - Who is making the call on identity? Are DATSIP and linkup doing things on it.

15. Strengthen the functions of other health statutory authorities to drive health equity
    - Yes state.

16. Factor equity into existing Queensland Health funding models
    - Yes, but based on needs.

17. Utilise the health equity strategies as future health investment plans
    - Yeah, not so much of a priority.

18. Establish pilot Marmot city regions across Queensland
    - Lower priority for the region.
    - Apprehension about how it would map onto Queensland Health system which is different to NHS.

19. Set Queensland Health procurement targets
    - Not a high priority.

20. Drive an anti-racism campaign
    - Would be a higher level of priority in the future.
    - Questions about Cultural Capability and how this links with 4-hour mandatory training and Courageous Conversations (adopted by the HHS).
    - How do we measure it?
    - There seems to be a disconnect between explicit racism and cultural capability courses.
    - Embed cultural capability into framework.

Overall Comments
- Understanding and promoting ethics of why people work—to look after mob not the pay.
- What community need, not what Canberra need—that’s healing.
- Blue card issues and being knocked back from historical issues.
- Target 1—Establish a First Nations Health Board.
